# TR-707/727 SERVICE NOTES

First Edition

# **SPECIFICATIONS**

Memory Capacity

: 64 Rhythm Patterns (16 x 4 Group)

Track

: 4 (1 to 4; continuous Maximum measures=998)

Step Tempo : 1 to 16 steps/measure

: ] = 38 to 250

Rear Panel

: Master Out (L,R/MONO) [8Vp-p, 1K $\Omega$ ]

Trigger Out

: +5V, 20ms Pulse

TR-707 . . . . Rim Shot TR-727 . . . . Hi Agogo

Sync In/Out (5P DIN): (1: Run/Stop, 2: GND, 3: Clock, 4: NC, 5: Continue)

Power Consumption : 2.4 W

Dimensions

380 (W) x 73 (H) x 250 (D) mm

14-15/16" (W)  $\times$  2-7/8" (H)  $\times$  9-13/16" (D) in : 1.5 kg/13 lb. 5 oz.

Weight Accessories

: 12V AC Adaptor

Connection Cord PJ-1

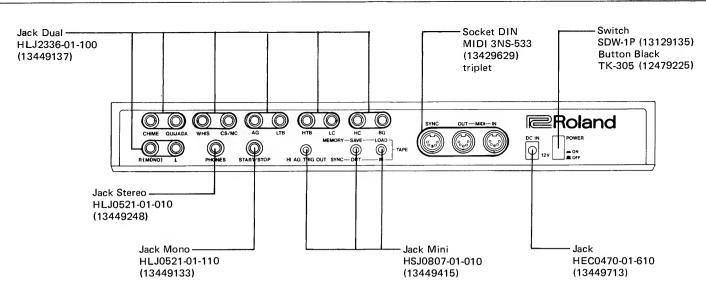

: Memory Cartridge M-64C Options Pedal Switch DP-2

15179692 HN613128PG24 CMOS MASK ROM

(Ver.2 SN533100-up)

## UPWARD COMPATIBILITY

#### Ver.0

In Pattern PLAY mode -- Selecting a pattern from different scale while repeating STOP and START or CONTINUE sometimes leads to Power-ON initialization.

ROMs of Ver. 1 always run the new pattern at the beginning of a measure.

When the unit is used as a Master -- Repetitions of STOP and CONTINUE more than 30 times would cause generation of a redundant MIDI clock \$F8.

When the unit is used as a Slave -- Will miss a MIDI IN clock when STOP signal follows the Clock within lms.

MASK ROM of Ver.2 cures this problem.

For a replacement Ver.2 or up is recommendable.

上位コンパチなので補修用としてはバージョン番号の大きいPROMの使用が望ましい。

#### Sound ROM

# CIRCUIT DESCRIPTIONS

TR-707 and TR-727 are designed based on the same circuit configuration, having more in common with each other. The differences between two models are sound data, component values in several audio stages and a couple of pin connections at IC30 of Voice board.

Both models derive all rhythm sounds from PCM-encoded samples of real sounds stored in ROM. Each waveform is stored either independently (e.g. CYMBAL) or together with another waveform as shown in Tables 1 and 2. Accordingly, sound reproducing circuits are classified into two: multiplex and single. The following description focuses on PCM sound reproduction system, taking TR-707 circuits as a representative.

## 回路解説

TR-707/727 は ROM にメモリされている PCM波形 (サウンドデータ)を音源として利用しています。楽器の種類が異なる為一部に結線や定数の違いがあるものの、全体の回路構成は両機種に共通です。以下 TR-707 を例にとって説明します。

表1及び2から判る様に、IC34、IC35 には複数音源のデータが、IC19、IC22 には単一音源がメモリされています。従って、これら音源データの読み出しから再生までの過程もシングル方式とマルチの二種類があります。

......

#### MULTIPLEX SOUND PROCESSING

#### MULTIPLE ADDRESS COUNTERS

IC30 RD63H114 on Voicing Board is a custom-LSI(called Gate Array) designed for use in PCM-sound multirhythm systems. The LSI assumes the key role in the TR-707 sound system. It incorporates a master clock generator, timing generator and 8 13-bit address counters. The timing generator, not only supplies clocks to these counters for generating address bits, but also feeds peripheral circuits with various timing clocks to sync the entire system operation. Of these timing clocks, A, B and C together make a channel-select code for signaling the ROMs (ICs 34, 35), MUX IC40 and DMUX IC41 which voice is being addressed by an address counter in IC30.

#### MULTIPLEX SOUND SYSTEM BLOCK DIAGRAM IC30 GATE ARRAY SELECTOR **DECODER** (Multiple Address Counter) CPU IC11 IC34 ROM IC5 IC35 TB-707 BASS DRUM TR707 SNARE DRUM н. том ROM ADDRESS L. #### マルチ音源

#### マルチプル・アドレスカウンタ

多音源データをメモリしている ROM(IC34,35) からのデータ読み出し、D/A変換、S/Hおよびその他の 関連回路は、IC30 RD63H114をマスターとして動作します。 RD63H114はマルチ音源機器用に開発されたカスタム LSIであって、内蔵のクロックおよびタイミング発生回路によりこれら外付回路を同期させるクロック 信号を出力します。同期クロックのうちA,B,Cはボイス・チャンネルのセレクトコードを形成しますので特に重要です。IC30は ROM (IC34,35) 内の各音源データのアドレスを次々と出力して行きますが、A,B,Cは今どの音源アドレス(アドレス・カウンタのチャンネル番号)が出力されているかを、ROM 以外の MUX IC40, DMUX IC41にも知らせます。(例 SDの場合 A=1, B=0、C=0。次頁のタイミングチャート参照)

Now suppose that TR-707 is to run with BASS DRUM 1(BD-1) being selected, the CPU IC5 puts XST0 (CH0 start) and XSTA (XST0-XST7 enable) low, resetting counter 0, presetting it to the starting address 0000H and allowing it to count the clock pulse XCK0 from pin B in discrete steps. The counter continues counting until it increments up to 1FFFH and tops there until the next trigger pulse is received. While counting, the contents (a group of 13 clock pulses) of the counter is transferred to address selector where it is read every  $40\mu$ s and is presented along ports ADR0 through ADRC—13 lower address bits.

#### ROM MEMORY READING

IC34 and IC35, 32,768 word by 8 bit ROM, require 15 address bits to access their memory locations. Clocks A and B from IC30 serve as MSBs while C indicates which one of two ROMs is to be selected—Chip Select.

On the contrary, LSB ADR0 is defeated when particular voice is selected: BD-1 and BD-2 share the same memory area with even addresses allocated to BD-1 and odd ones to BD-2 as shown in Table 1. With BD-1, data selector IC33 blocks ADR0 and passes "0" data from IC32 onto A0 of ROM IC35. With BD-2, IC33 selects "1". With Low Tom, Mid Tom, Hi Tom or Hi Hat, ADR0 is allowed to reach A0.

Each 8-bit memory location (PCM waveform data) in ROM is loaded into latch IC36 on the rising edge of CLK4. This 8 bit data is, if converted to analog equivalent by D/A converter IC37 as it is, not restored to its original amplitude. A certain technic is involved during PCM to improve S/N ratio, to have higher resolution, etc. A signal coming from Envelope Generator into (+) REF pin gives right tone contour to a continual PCM waveforms being decoded and converted to an analog sound.

TR-727 Sound Data ROM

IC NO.	ROM	CE	CS	VOICE	MEMORY	
IC34	HN61256PC71	Н	L	HI BONGO	2N ADRS 4k byte	
	(15179694)			LOW BONGO	2N + 1 ADRS 4k byte	
				MUTE HI CONGA	2N ADRS 4k byte	
				OPEN HI CONGA	2N + 1 ADRS 4k byte	
				LOW CONGA	8k byte	
				HI TIMBALE	8k byte	
IC35	HN61256PC80	Н	Н	LOW TIMBALE	8k byte

				MARACAS	2N + 1 ADRS 4k byte	

今 BASS DRUM1 (BD-1)が選択された状態で、リズムが走ったとすると、IC30に $\overline{XST0}$  (チャンネル0スタート)と $\overline{XSTA}$  (XST0-7イネーブル)が加わり、カウンタ CH0は0000Hにリセットされた後XCK0に加えられて来るクロックBをカウントして行きます。この13ビット・アドレスカウンタのカウント値は $40\mu_S$ 毎にアドレス・セレクタにより ADR0-ADRC端子に出力されて行きます。(次にもう一度 $\overline{XST0}$  が加わらない場合、カウンタは最大値 1FFFH に達するとストップしたままとなります。)

#### サウンド・データの読み出し

256KビットROM IC34,IC35のメモリ・ロケーションにアクセスするには、15ビットのアドレスが必要です。残りのMSB2ビットにはIC30のA,Bクロックが当てられます。クロックCは、どちらのROMにアクセスするかを選ぶチップセレクトです。一方LSBADROは、音源によってはROMアドレスとして使用されません。例えば、BD-1とBD-2は同じROMのメモリ・エリアを共有しており、BD-1には偶数のアドレスがBD-2には奇数アドレスが割当てられています。(表1参照)。この為、BD-1の場合、ROMのA0には常に"0"がIC32,IC33を通じて加えられます(BD-2の場合は"1")。

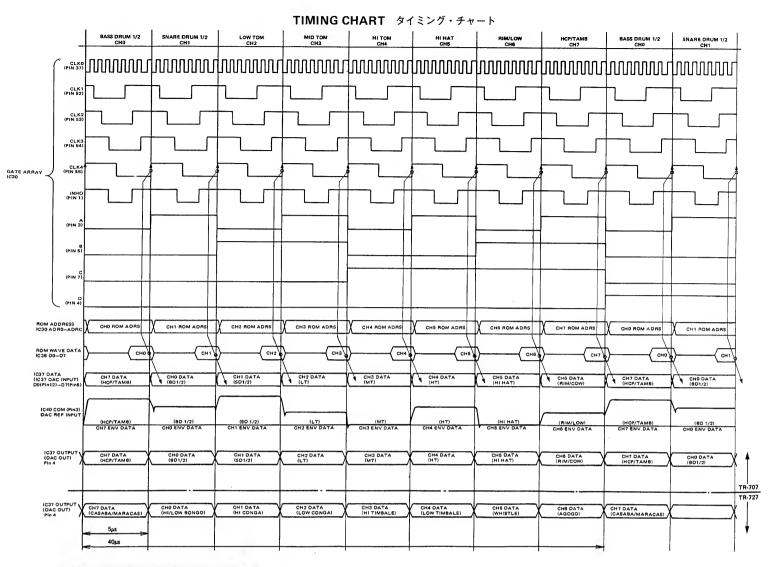

ROMから読み出されたサウンド・データは、IC37(ラダー・ネットワーク内蔵)でアナログ電圧に変換されリズム音波形の一部分(サンプリング波形)を再現しますが、振巾値は原音の値とは必ずしも一致しません。これはPCMの過程においてS/N比や分解能向上の処理が含まれている為です。再生音のエンベロープは、IC37の(+)REFに流れ込むENVGENからの信号によって左右されます。

Table 1 表1

TR-707/TR-727 JUL. 1985

#### ENVELOPE GENERATOR

Data coming to latch IC31 is a combination of LEVEL and DYNAMICS (ACCENT). The value of LEVEL is always constant regardless of voice selected, while DYNAMICS varies with MIDI Velocity or ACCENT amount setting.

Although LEVEL/DYNAMICS is connected to all 8 ENV GENERATORs it is allowed to enter only the transistor whose base-emitter junction, for example Q26, is being forward biased by a TRIG from latch IC27 or IC28 at XSTA rate. Q26 output is then connected by IC40 to (+) REF pin of IC37 every 40µs with its level decaying according to C53xR59 time constant as the successive BD-1 data are converted to analog voltages, giving a bass drum contour to the voice.

The DAC output is boosted at Q41 and Q42 conjunction and is channeled into the S/H which is designated by A B C code placed at IC41 select pins.

As can be seen from the timing chart, the timing of enveloping and D/A converting lag one slit behind the memory addressing. That is, BD-1 sound read from ROM with channel No. ABC=000 becomes an audible sound when channel No. is represented by ABC=100. This is because the data accessed on a positive going CLK4 with ABC=000 is latched into IC36 on the next CLK4 with ABC=100. Consequently, TRIG data to ICs 27 and 28, and LEVEL/DYNAMICS data to IC31 are made to delay one CLK4 cycle to keep pace with D/A conversion at IC37.

#### エンベロープ アクセント

XSTA(SXT0-7イネーブル)はIC30のアドレスカウンタに加えられると同時に、ラッチIC27,28のCKにも加えられ、BD-1が選択されている時には、ENV GENのQ26がTRIGパルスによって導通し、LEVELとDYNAMICS(ACCENT)の混合された電圧がC53に充電されます。なお、LEVELの値はどの音源の場合でも常に一定です。また、LEVEL/DYNAMICS CVは8本全てのトランジスタに印加されますが、TRIGパルスが現在加わっているトランジスタにのみに流入します。Q26の出力はIC39dを通り、IC40により時分割でD/AコンバータのREF端子へ送られて行きますが、振巾はC53×R96の時定数に応じて減衰して行きます。時定数はBDのサウンド・データ全部がROMから読み出される時間より長くなる様に設定されています。

注 IC30のアドレス・カウンタのチャンネル番号とIC40/41のチャンネル番号が異なっています。これはROMのサウンドデータが、アクセスされた時よりCLK4の1サイクル分遅れてIC36にラッチされD/A変換される為です。したがってTRIGおよびLEVEL/DYNAMICSデータもその分遅れて出力されます。

#### HIHAT

Output from Q35 has no distinction between closed hi hat and open hi hat and is given a particular waveshape (decay) at VCA Q22 and IC42 as OPEN/CLOSED select signal is applied on the base of Q21.

#### SINGLE SOUND PROCESSING

Each of CYMBAL voices (RIDE and CRASH) has dedicated sound ROM, address counter, D/A converter and envelope generator. The difference from Multiplex processing in circuit configuration is that envelope control is accomplished after the wave data becomes analog form. LEVEL/DYNAMICS (ACCENT CV) rounted to Q18 emitter (CRASH) is charged into envelope capacitor C50 on a TRIG, giving a contour to CRASH sound passing through Q14.

TR-707 Sound ROM

IC NO.	ROM	CE	CS	VOICE	MEMORY
IC19	HN61256PC73	Н	L	CRASH CYMBAL	32k byte
	(15179663)				
IC22	HN61256PC74	Н	L	RIDE CYMBAL	32k byte
	(15179664)	İ		i	

Hi Hat に対しては、もう一度エンベロープ回路(VCA-IC42a,Q32)が追加されており、クローズかオープンかによりディケイタイムを切替えています。

#### シングル音源

RIDE CYMBALおよびCRASH CYMBALは、それぞれ専用のアドレス・カウンタ,ROMおよび D/A コンバータを持っていますが動作原理はマルチ音源の場合と変りません。ただし、エンベロープがD/A変換後VCAに加えられる点が違います。

# **TESTING AND ADJUSTING**

The built-in test program executes the following test and adjusting routines while in Test Mode.

### RUNNING TEST PROGRÂM

While holding down CLEAR and INSTRUMENT, switch the power ON. The unit is now in the test mode and the test program initiates test routines with TEST 1.

## TEST 1. LED SEQUENTIAL LIGHTING

Upon entering test mode the program lights up LEDs, starting with MAIN KEY 1 through SCALE INDICATOR, PATTERN GROUP and CARTRIDGE (red and green alternately) and repeats.

Leave the LEDs lighting and go to TEST 2.

#### TEST 2. ALL LEDs AND LCD DOTS LIGHTING

Press ENTER and verify lighting of all LEDs and LCD dots.

Leave them lit and go to TEST 3.

# TEST 3. SWITCHES AND ACCENT AMOUNT READING

Press ENTER. All LCD display will be cleared OFF. Referring to the illustration below, push numbered buttons 1—32 one by one and check for the lighting of corresponding dot on either Bass Drum (BonGo) or Snare Drum (Hi Conga) row on the display window. Slide up or down ACCENT and verify that TEMPO MEASURE window reads 1 and 16 at the extremities of travel.

# テストおよび調整

TR-707,TR-727 には回路機能チェックおよび調整用のプログラムが内蔵されています。このプログラムを 走らせるにはテストモードに入る必要があります。

#### テストモード

CLEAR と INSTRUMENT ボタンを同時に押しなが ら電源をオンするとテストモードとなり、テスト 1 が自動 的に実行されます。

#### テスト1 LED順次点灯

テストモードに入ると、メインキーの1から順次 LEDが 点灯して行きます。 CARTRIDGE の LEDは赤と緑が 交互に点灯します。

LED の点灯はくり返されますが、そのままの状態でテスト 2 へ進んで下さい。

#### テスト2 LEDおよびLCD全点灯

ENTER を押します。全てのLED およびLCD 上の全ドットが点灯する筈です。

そのままの状態でテスト3へ進んで下さい。

#### テスト3 スイッチおよびアクセントレベル読込み

ENTER を押すと LCD のドット が消えます。 パネル上 のスイッチを押すと、右図に示す様に、対応した番号のドット が LCD の上に表示されます。

If not verified, go to ACCENT AMOUNT ADJUST-MENT below without exiting the test mode.

When all tests are satisfactory, turned the power off and on again to return to the normal operation mode (if necessary).

#### **ACCENT AMOUNT ADJUSTMENT**

This test must be carried out in the test mode and follow the tests above.

- 1. Set ACCENT at MIN and adjust TM2 of VOICING board for a transition point of "1" to/from "2" of TEMPO MEASURE display reading.
- 2. Set ACCENT at MAX and adjust TM3 for a transition point of "15" to/from "16" of TEMPO MEASURE display reading.

The unit will remain in the test mode until the power is turned OFF.

#### TEMPO CLOCK RATE ADJUSTMENT

This adjustment must be done in the normal operation mode.

1. Set TEMPO at FAST and adjust TM1 of VOICING board for 250 reading on T.EMPO MEASURE window.

次に、アクセント(AC)つまみを上下させるとLCDの TEMPO/MEASURE 部に数字が表示されます。MIN の位置で"1"、MAXで"16" とならない場合は、次の アクセントレベル調整へ進んで下さい。

調整が不要で、通常のモードに戻るには一旦電源をオフに して下さい。

#### アクセントレベル調整

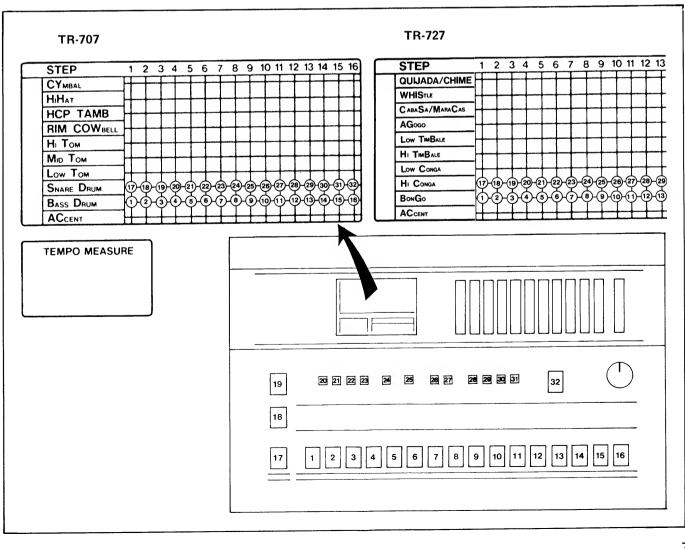

本調整はテストモードで行ないます。上記のテストの後で 行なって下さい。

- アクセント(AC)をMINにセットし、TM2(ボイシング基板)でTEMPO/MEASURE の表示が "1"か"2"になる臨界点に調整します。
- A C を MAX にセットし、TM3 で表示が"15"か "16"になる臨界点に調整します。

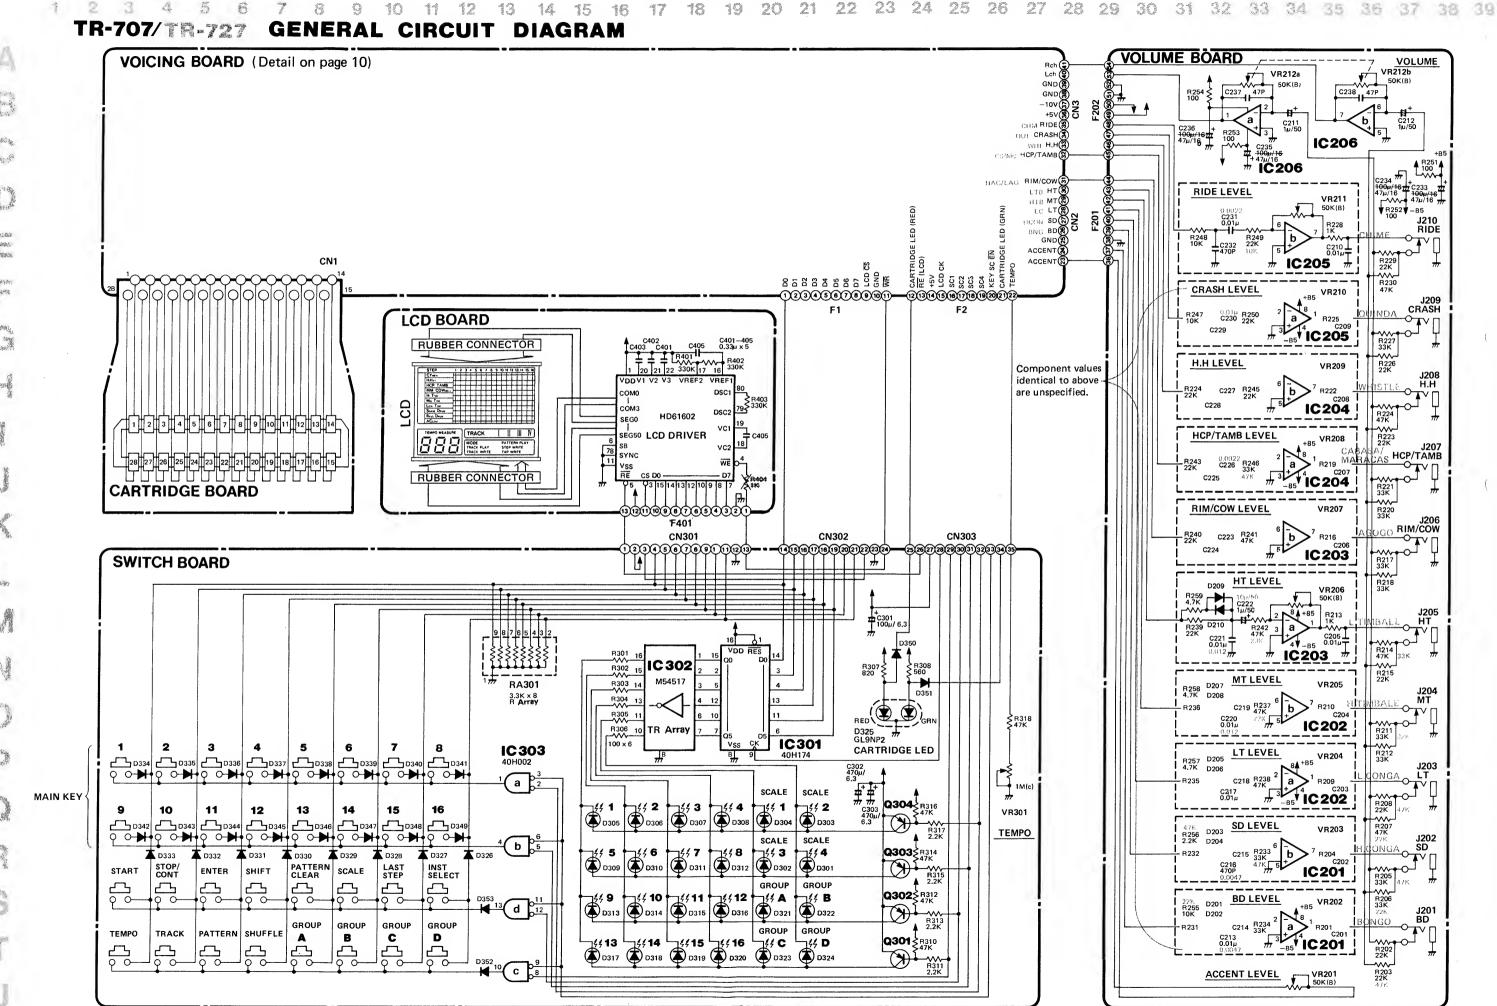

#### テンポ調整

本調整は通常のモードで行ないます。テストモードになっている場合は、一度電源をオフにして下さい。

TEMPOをFASTにセットし、TMI(ボイシング基板) でTEMPO/MEASUREの表示が 250 になる様調整 します。
